

AI NEWSLETTER FOR K-12

Hi Kids,

We are a personalised Edtech company that teaches AI and Coding to children in the K-12 grade band. It's our mission to equip you with a deep conceptual understanding of AI and Machine Learning so that you can either choose a career in Data Science or use it in the discipline of your choice. As you may be aware, today AI is used in various fields - from Health, Agriculture, Art, Marketing to practically all industries.

It's over 2 years and Covid-19 is still a part of our lives. However, a lot of the progress in understanding and managing this pandemic has been expedited due to the application of AI. Did you know that AI has been used not only for diagnostic purposes, but also for tracking the spread of the disease, availability and management of health care equipment, cataloguing and retrieval of research papers and many more use cases.

In this issue, we have a live talk by Daniel Lindenberger where he shares his experience as a volunteer at CoronaWhy and he has also shared some of the CoronaWhy datasets that one can tinker with and learn from at one's own pace.

We have curated articles and simple videos to showcase how AI helped our doctors, the government and the researchers to understand this virus better and help society at large.

As the world has moved on to a hybrid platform, where technology will always be a part of children's learning, it is imperative that we reiterate digital safety practices and keep them safe online. For parents and educators we have a comprehensive article on page x.

We would also love to hear from you. Do write in with your opinions, share projects and send us your articles.

Coding and More believes that learning should be fun!! We hope to take learning beyond the classroom and make it real and impactful. In particular, the kids corner is one of my personal favourites as I see children apply technology to subjects of their personal interest and passion. When a child links machine learning to his/her favourite subject in school or a personal hobby - as educators we know we have ignited the spark.

We hope you enjoy reading this as much as we enjoyed making it.

AI BYTES

As the third wave of Covid -19 took all of us by surprise, people around had mixed emotions - some of despair, some fear and some a laissez faire attitude. One thing though was certain that without AI - our researchers and doctors would not have made the headway they did this pandemic. To learn more about the various applications of AI - tune in [here](#).

Did you know that scientists in Canada had already used AI and data from airline and medical information to predict the beginning of a new pandemic? [Click here](#) to understand how AI was used to track and help find new treatments for Covid-19

One of the first and critical steps in an infectious pandemic is to identify, isolate and treat infected patients. [Click here](#) to see how doctors were able to use the power of AI in the field of diagnostics.

Hiring Alert!!! Would you like to come teach with us?

5 Covid-Driven A.I. Trends That Are Changing Health Care

Closing the gap between in-person and virtual visits is just the tip of the iceberg

This is an insightful article that showcases not only how AI helped the healthcare system become more efficient but also how technology is lowering the cost of quality healthcare and bridging the accessibility gap making medical care more equitable. [Click here](#)

Datasets to Experiment

Enclosed below are 4 kaggle datasets shared with us by CoronoWhy

Below are the four questions we focused on, with a link to each of the notebooks.

Transmission, incubation and environmental stability

<https://www.kaggle.com/crispyc/coronawhy-org-task-transmission-incubation>

Human risk factors

Als that read sentences are now catching coronavirus mutations

NLP algorithms designed for words and sentences can also be used to interpret genetic changes in viruses—

NLP - a cool AI tool that powers chatbots is used to predict mutations in the virus. [Click here](#) to learn more.

This AI Software Nearly Predicted Omicron's Tricky Structure

New algorithms that decipher complex sequences of amino acids offered an early view of the coronavirus

Using data and machine learning, lead researchers in the USA were able to predict the omicron mutations - [click here](#) - these headways pave the way for further research.

KID'S CORNER

Dear Kids,

This is your corner. please feel free to write in, share your projects, poems, stories, questions about AI!

Anika has used her AI skills to train her AI model to recognize lung xrays and predict if the patient has covid or not and has also built a chatbot that will help patients understand if they are at risk of having covid and need to seek medical advice. Click [here](#).

Anika Shah, Hillspring International

Parent's Speak

I am happy to say that it has been a great experience so far with Beesan finishing two full modules of AI. She is currently working on her third. The staff has been very cooperative and transparent about the course. I am able to follow up on my daughter's progress through immediate feedback after every lesson. The teacher is very professional and friendly – and Beesan always looks forward to her class. I am sure that with Coding & More, Beesan will fulfill her love and passion in this field. These courses will definitely help her in her future studies.
