No Starch Press Foundation Opens Call for 2022 Grant Applications
$100,000 USD to be awarded for Hacker and STEM-related Proposals

SAN FRANCISCO, March 22, 2022 –The No Starch Press Foundation (NSPF) today announced the opening of its 2022 Grant Cycle. NSPF will accept applications from today until 11:59 p.m. PST on Thursday, June 30, 2022. NSPF will award up to $100,000 in grants of up to $10,000 each to projects designed to advance the worldwide hacker community.

The theme of this year's grant cycle is artificial intelligence and machine-learning with projects in these areas particularly encouraged. But as with all prior grant years, NSPF encourages applications for all projects that promise to support the global hacking community.

"Hackers globally and of all types, both old and new school, play an increasingly important role in driving innovation, improving computer security, teaching our young people, and growing our collective knowledge," says NSPF Founder and Chair of the Board, Bill Pollock. "The Foundation was formed to further this mission through our grant program, which is designed to directly support the global hacking community."

Eligible applicants include people of all ages, wherever they reside, whatever the discipline. NSPF particularly welcomes applications from small organizations, students or student groups, and/or individuals.

Grant awards may be awarded on a rolling basis. Final announcements will be made no later than October 22, 2022, "National Make a Difference Day", on the NSPF's website at: https://nostarchfoundation.org/.
